

Write a simple and easy-to-understand algorithm for “Hostel – Room Allocation – Feature Set III” suitable for a BCA 1st-year college project.

Include the following steps:

Start.

Enter student details such as Student ID, Student Name, Gender, Mobile Number, Course, and Address.

Enter room details such as Room ID, Room Number, Room Type, Capacity, and Available Beds.

Select a room for the student.

Check whether a bed is available in the selected room.

If a bed is available, allocate the room to the student.

Store the Allocation ID, Student ID, Room ID, and Allocation Date.

Update the number of available beds after allocation.

Enter hostel fee details such as Fee ID, Student ID, Total Fee, and Due Date.

Enter payment details such as Payment ID, Student ID, Amount Paid, and Payment Date.

Check the payment status.

If the full fee is paid, display “Paid”; otherwise, display “Pending” or “Partially Paid”.

Display the student, room allocation, hostel fee, and payment details.

Stop.
